

UZAIR SAIYED

Gujarat, India

justuzairsaiyed@gmail.com [Portfolio](#) [0xJustUzair](#) [JustUzair](#)

Summary

Smart Contract Security Researcher with hands-on experience auditing protocols across **Solidity** and **Rust** ecosystems. Conducted security assessments at **Nethermind** covering re-staking, account abstraction, bridges, and governance modules. Expanding expertise into **Rust**-based security through **Solana**, **Soroban** and **Move** security research. Graduate of **Ackee Blockchain Solana Bootcamp** and **RektOff Solana Rust Security Cohort** (75 chosen from 2100+ applicants). Technical background demonstrated through winning **Fantom Q1 2023** and **Theta Network 2023** hackathons.

Web3 Security Research

Smart Contract Audits | [Audit Reports](#) | [Technical Blogs](#)

Dec 2024 – Present

- Conducted private audit engagements with **Shieldify** (GameFi & LP protocol) and **Guild Audits** (NFT Launchpad), performing manual code review and writing proof-of-concepts for identified vulnerabilities.
- Documented findings and proposed mitigations for vulnerabilities discovered during audits.
- Participating in security research across multiple ecosystems: **Solidity**, **Rust**, etc on public audit platforms.
- Publishing security research and technical articles on Medium/Twitter(X) covering smart contract vulnerabilities, Rust concurrency patterns, and blockchain security best practices.

Experience

BuildBear Labs | Web3 Solutions Engineer

Jan 2025 – Nov 2025

Remote, Singapore

- Created end-to-end **Web3 CI/CD test flows** with BuildBear, showcasing integrations and testing with complex protocols like **Uniswap V4** and **Uniswap V3**, covering setup & whitelisting, automated deployment, testing, etc, with GitHub Actions.
- Performed black-box testing of pre-release features, identifying edge-case failures and providing technical feedback to engineering teams across product, frontend, backend, and infrastructure.
- Spearheaded onboarding for protocol teams by architecting testing solutions for **Across** and **LI.FI** bridge logic, bypassing the lack of viable testnet environments; this strategic unblocking of partner dev-cycles drove immediate adoption, yielding **50+ plugin access requests each** within 30 days of launch.
- Individually researched, built, and documented real-world use cases; **Uniswap V3 swaps using Pimlico's Paymasters and Bundler**; created videos, written tutorials & documentation, demonstrating how these flows work with BuildBear's **Sandbox environments** and their plugins.
- Researched and created a wide range of BuildBear tutorials, including multiple in-depth **video walkthroughs**, for plugins like: **Across**, **LI.FI**, **Pimlico**, and many more.

Nethermind | Smart Contract Auditor Intern

Sept 2024 – Dec 2024

Remote, United Kingdom

- Conducted security reviews across **re-staking** protocols, **AA paymasters**, **bridges**, **governance** modules, and **proof-of-liquidity** mechanisms.
- Reported vulnerabilities and provided mitigations to enhance the security of **smart contracts**.
- Analyzed smart contracts across **Solidity** and **Cairo** ecosystems.

Kyte Social | Full Stack Web2 & Web3 Intern

April 2024 – July 2024

Remote, India

- Developed smart contracts with **Solidity** and implemented **ERC721**, **ERC1155** NFT standards using **OpenZeppelin**.
- Utilized **Factory Contract** pattern and implemented role-based smart contracts for token rewards with **ERC20** and **Chain Native Token** locking.
- Tested smart contracts using unit testing, fuzz testing, and invariant testing with **Foundry**.
- Signed off-chain messages for reward claiming from **NodeJS** server using **Web3JS**.
- Integrated smart contracts with frontend using **NextJS**, **Wagmi**, **Viem**, **EthersJS**, and **Web3JS**.
- Developed a user-friendly form **enabling rapid creation of custom NFT Collections**, including both **ERC721** and **ERC1155 standards**, within seconds. Significantly **reduced time and effort for users by 90%** while abstracting underlying complexities.
- Synced data to/from blockchain to backend with **MongoDB** database for consistency and authentication.

Projects

Pumpkin Index Protocol | [Live Demo](#) | [Github](#) | [Video Demo](#)

- Winner of **Fantom Blockchain Q1 2023 Hackathon** on Devpost
- Key Technologies: **Solidity, Hardhat, NextJS, TypeScript, Shadcn-ui, Framer-motion**
- Developed a **DeFi protocol** for creating and managing crypto indexes on **Fantom Blockchain**
- Implemented features for index creation, management, issuance, and redemption with 0-1% token fee per year

ThetaFans | [Live Demo](#) | [Github](#) | [Hackathon](#) | [Video Demo](#)

- Winner of **ThetaChain Blockchain 2023 Hackathon** on Devpost
- Key Technologies: **Solidity, Hardhat, NextJS, Theta Blockchain, Theta Video API**
- Eliminated costly intermediaries by utilizing the decentralized network of video providers
- Utilized **Theta Video API** for efficient video streaming through decentralized network
- Implemented monetization features like **multi-tier subscriptions, NFT-gated video network**, and on-chain **proof-of-subscription**

Mintrrs | [Live Demo](#) | [Github](#) | [Documentation](#)

- Key Technologies: **NextJs, Foundry, Solidity, TypeScript, Tailwind, Wagmi, Viem, IPFS**
- **Artists** can sign up for the platform, where they can **upload multiple art layers** like eyes, nose, mouth, etc.
- The art layers are **combined and converted to arts at random**, which are then **pinned to IPFS**.
- The **images from IPFS** are used to **generate metadata dynamically**, and the metadata is **pinned to IPFS as a directory**.
- The **artist** can then **pay gas and create their own ERC1155 Collection**, and **accept payments in either Chain Native Tokens or MockUSDC ERC20 tokens**.
- Users can buy the arts from the collection on the platform, and the artist can **withdraw revenue** from their ERC1155 NFT Collection.

Certifications

- **Ackee Blockchain Solana Bootcamp (Graduate)** [Graduation Repo](#) | [Graduation Certificate](#)
- **Smart Contract Security and Auditing** on Cyfrin [View Certification](#)
- **Python Specialization** on Coursera [View Certification](#)
- **Node.js, Express, MongoDB & More: The Complete Bootcamp** on Udemy [View Certification](#)
- **The Complete JavaScript Course 2024: From Zero to Expert!** on Udemy [View Certification](#)

Technical Skills

Programming Languages: *TypeScript, Rust, Python, Golang*

Blockchain & Web3: *Solidity (Foundry/Hardhat), Rust (Solana, Soroban, Move), ethers, Wagmi, Viem*

Web Development: *NextJS/React, Node.js, Express, Tailwind*

Artificial Intelligence: *LangGraph, LangChain, CopilotKit*

Databases: *MongoDB, Prisma, MySQL*

Tools & Technologies: *VSCode, Git, GitHub, Docker*

Position Of Responsibility

Web Development Expert – GDSC (Google Developer Student Club) | [Seminar project repository](#)

- Conducted a **2.5-hour seminar** on web development, covering **HTML, CSS, JavaScript, APIs, and Axios**
- Mentored students across different academic years, fostering their skills and interest in web development technologies

Achievements

- **Fantom Q1 2023 Hackathon Winner** on Devpost [View Hackathon](#)
- **Theta Network 2023 Hackathon Winner** on Devpost [View Hackathon](#)
- Served an 8-month term as **GDSC (Google Developer Student Club) Web Development Expert**

Education

Sarvajani College of Engineering and Technology
Bachelor of Technology Computer Engineering (CGPA of 9.17)

June 2024
Gujarat, India
